| /Tonia LM Dollinger/<br>Supervisory Patent Examiner, Art Unit 2443   |  |   |                                  |

Continuation of 11. Note: Applicant's arguments filed 12NOV2008 have been fully considered but they are not persuasive. Furthermore, the majority of these arguments have already have been responded to in the Final Action mailed on 03OCT2008

Applicant argues that Kenyon et al. discloses "...when an overlay is shared/transferred between computer spaces, it implies that the documents and associations contained in the overlay are also transferred from one computer space to the other."

The Examiner respectfully disagrees Kenyon et al. clearly discloses that information is not replicated by the overlay (column 4 lines 6-10).

Applicant argues that "...the claimed subject matter relates to transferring/sharing only computer objects but not object associations between computer spaces. Thus, when an object is transferred between computer spaces associations between a shared object and other objects already existing in a new space into which the shared object is transferred are automatically formed.

The Examiner respectfully disagrees; The Examiner fails to see how the associations are to be automatically formed in the second computer space when only the object itself is transferred from the first computer space when except on expect without transferring the object associations with the object. The transfer of association information would be required in order to enable the claimed invention to function. Furthermore, the feature of transferring/sharing only the computer objects but not object associations between the computer space is not reflected in the claims. Applicant is clearly claiming that object associations are shared between computer spaces "automatically sharing from the first computer space with the second computer space the one or more associations in the first computer space between the selected object and the first objects in the second computer space." (Islaim 1, among others).

Furthermore, Applicant's invention is entitled "Sharing Computer Objects with Associations" which implies sharing the computer objects and their associations, in addition, the specification clearly indicates that such association information is shared (abstract, paragraph [0005], [0006], [0007], among others).
